

WordPress: associare un file PDF ad un post

Tramite i metabox di WordPress è possibile associare qualsiasi tipo di risorsa ad un post o ad una pagina. In questo articolo vedremo come creare una lista di file PDF da associare ad un post.

Il seguente codice, da aggiungere al file `functions.php`, crea una casella di selezione prendendo tutti i file PDF inseriti nella Media Library. Quindi crea uno shortcode per poter inserire il file scelto nel post.

```
add_action( "admin_init", "pdf_init" );
add_action( 'save_post', 'save_pdf_link' );

function pdf_init() {
    add_meta_box( "my-pdf", "Documento PDF",
"pdf_link", "post", "normal", "low" );
}

function pdf_link() {
    global $post;
    $custom = get_post_custom($post->ID);
    $link    = $custom["link"][0];
    $count   = 0;
    echo '<div class="link_header">';
    $query_pdf_args = array(
        'post_type' => 'attachment',
        'post_mime_type' => 'application/pdf',
        'post_status' => 'inherit',
```

```

        'posts_per_page' => -1,
    );
    $query_pdf = new WP_Query( $query_pdf_args );
    $pdf = array();
    echo '<select name="link">';
    echo '<option class="pdf_select">Seleziona
file PDF</option>';
    foreach ( $query_pdf->posts as $file ) {
        if( $link == $pdf[] = $file->guid ){
            echo '<option value="' . $pdf[] = $file-
>guid.'" selected="true">' . $pdf[] = $file-
>guid.'">';
        }else{
            echo '<option value="' . $pdf[] = $file-
>guid.'">' . $pdf[] = $file->guid.'">';
        }
        $count++;
    }
    echo '</select></div>';
    echo '<p>Seleziona un file PDF da associare
al post.</p>';
    echo '<div class="pdf_count"><span>Numero dei
file:</span> <strong>' . $count . '</strong></div>';
}

function save_pdf_link(){
    global $post;
    if ( defined('DOING_AUTOSAVE') &&
DOING_AUTOSAVE ){ return $post->ID; }
    update_post_meta( $post->ID, "link",
$_POST["link"] );
}

add_action( 'admin_head', 'pdf_css' );

```

```

function pdf_css() {
    echo '<style type="text/css">
.pdf_select{
    font-weight:bold;
    background:#e5e5e5;
}
.pdf_count{
    font-size:9px;
    color:#0066ff;
    text-transform:uppercase;
    background:#f3f3f3;
    border-top:solid 1px #e5e5e5;
    padding:6px 6px 6px 12px;
    margin:0px -6px -8px -6px;
    border-radius:0px 0px 6px 6px;
}
.pdf_count span{color:#666;}
</style>';
}

function pdf_file_url() {
    global $wp_query;
    $custom = get_post_custom( $wp_query->post-
>ID );
    return $custom['link'][0];
}

function add_pdf_file_to_post( $attrs ) {

    extract( shortcode_atts( array(
        'title' => 'File PDF'
    ), $attrs ) );
}

```

```
$pdf = pdf_file_url();

return '<a href="' . $pdf . '"' . $title .
'</a>';

}

add_shortcode( 'pdf-file', 'add_pdf_file_to_post' );
```

Esempio d'uso:

```
[pdf-file title="Documento PDF"]
```
